

How to build a snow lantern

—ゆきどうろうのつくりかた—

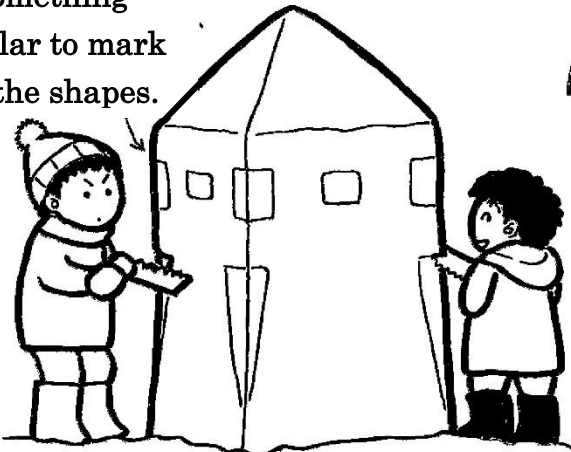

- 1.** Make a firm base by stomping thoroughly on the snow.

Make sure to wear a helmet as it is dangerous.

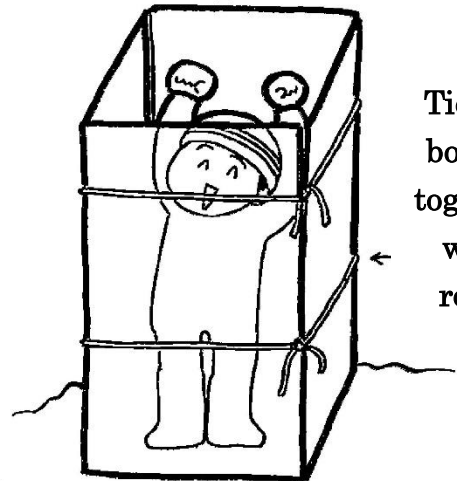

- 3.** Fill the box with snow. Always stomp on the snow hard to keep the shape firm.

Use red chalk or something similar to mark out the shapes.

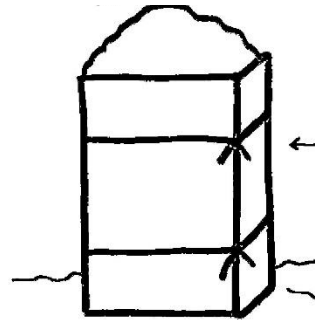

- 5.** Align the pattern and mark out the lantern's shape. Carve the snow according to the pattern.

Tie the boards together with rope.

- 2.** Erect the boards to form four-sided box around one person.

Filled with no gaps at all!

We nicknamed this part 'tofu' because it's a white block.

- 4.** Your tofu is now finished!

- 6.** Done!!
